

Cleura has a unique position in the market. It has services that offer quality comparable to the US giants, which was a precondition. But it also has processes in place and a thorough security approach that is completely unique in Europe.

John Vestberg , CEO of Clavister

Clavister to use Cleura in cloud-based cybersecurity offering

Clavister is a leading European supplier of cybersecurity solutions. The company has been in business for more than 20 years and is best known for its firewall solution, which is used by companies and organizations in both the public and private sectors in more than 150 countries. Clavister is a Swedish company, with its headquarters and research and development department in Örnköldsvik. This means it is deeply rooted in one of the world's most successful countries for cybersecurity, which offers a major competitive advantage for Clavister.

Clavister has always had its product development in Sweden and we are committed to working together with Swedish or European partners. There is currently substantial demand from customers to work with an IT security supplier with roots in Europe, says John Vestberg.

From firewall to European total supplier of cybersecurity

As one component in meeting demand from existing and future customers, Clavister has worked strategically to expand its product portfolio and offer services and products that reflect the demands of today.

The transformation to total supplier has taken a number of years and Clavister has now begun to deliver on its strategy by packaging its 15 different security products into five main

areas; Network Security and Firewall, Identity and Access Management, Device Security as well as Cloud Services. Clavister also offers Management and Analytics services via a control panel that makes it easy for customers to manage and gain an overview of the underlying security solutions.

The cloud and Cleura key elements in the new strategy

As part of the strategy, and as the Cloud Services area suggests, some of the security products are offered as cloud services, with Cleura as the base for delivery.

In our efforts to become a complete security supplier, one important element we have reviewed is the distribution of our services. Delivery through a cloud service was an obvious path to take, says John Vestberg.

Swedish roots with global reach form important part of customer offering

The choice of Cleura as the cloud platform developed gradually and was ultimately a completely natural decision. Cleura's origins and roots in Sweden was one important aspect, and that the IT infrastructure service is available in the key markets in Europe where Clavister sees greatest growth potential. In particular the German market, where Cleura has a public cloud node in Frankfurt. Another important parameter was that Cleura has used Clavister's products for many years as part of its data center infrastructure.

Cleura has a unique position in the market. It has services that offer quality comparable to the US giants, which was a precondition. But it also has processes in place and a thorough security approach that is completely unique in Europe. For us, Cleura was therefore the only European alternative that also offers the advantages of a small company in the form of opportunities for close collaboration. Clavister greatly values all of these benefits, says John Vestberg.

Launch of Clavister's first cloud service and more to follow

Once the decision to use Cleura was made, Clavister began preparing its service for distribution as a cloud service on the Cleura platform. This work lasted a few months and resulted in a few minor adjustments to adapt the service for cloud delivery.

We have had an excellent collaboration with Cleura and work progressed smoothly adapting our software for Cleura Cloud, not least as Cleura is based on OpenStack which facilitated the integration, says John Vestberg.

Several customers now use the control panel as a cloud service. Clavister's research and development department is working intensively to prepare additional services for delivery via Cleura as there is great demand for these services from both private and public sector operations in Europe.

Together with Cleura, we have taken an important step toward being a total supplier of European security from a base in Sweden," says John Vestberg. "Moving forward, I am convinced that all customers will use a mix of security solutions supplied both as installed software and as cloud services.

Clavister

Clavister is a leading European cybersecurity vendor with over 20 years of experience. Seated in Sweden, the company has customers—communication service providers, governments, enterprises and managed security service providers (MSSPs)—in more than 150 countries. Clavister provides unique security solutions to protect their digital assets and secure business continuity.

Cleura

Cleura is a leading global supplier of IT infrastructure cloud services based on OpenStack. The company delivers public, compliant and private clouds.

Cleura is certified according to ISO 9001, 14001, 27001, 27010, 27013, 27017 and 27018 – internationally recognized standards for quality, sustainability and information security. Its services are available from more than 20 data centers around the world. With its compliant cloud, Cleura ensures that customers adhere to demands originating from specific laws and regulations concerning auditing, reputability, data handling and data security, such as Basel, Solvency and GDPR. Cleura is a part of Iver.
