

**Cloud computing with built-in
regulatory compliance for the
future of Scandinavian eHealth**

cleura

An Iver company

Cleura Compliant Cloud is programmable cloud power as a service for industries and companies with high security and compliance requirements. Protect, process, and store your patient data in a Swedish cloud, in accordance with Swedish and European legislation.

Not just secure IT infrastructure

Programmable IT infrastructure as a service is a prerequisite for digital innovation. With Cleura Compliant Cloud, European e-health companies, banks, insurance companies, government agencies, and other organizations can take advantage of the cloud without violating European legislation.

Regulatory compliance in the cloud

Our cloud infrastructure complies with the standards set by MSB, the Swedish Financial Supervisory Authority, the Swedish Data Protection Authority, the Swedish Post and Telecom Authority, and the EU Directive on personal data storage.

“We always work closely with the region or hospital’s data protection officer when starting a new collaboration. In this context, Cleura’s secure cloud service with built-in compliance is essential for the healthcare sector to accept the service.

Eric Alhanko,
CEO of MediTuner

ISO-certified cloud services

Cleura has management systems certified according to ISO 9001, 14001, and 27001. These are internationally recognized standards for quality, environment, and cybersecurity.

A report on these certificates can be provided on request, and we welcome visits and inspections of the specific facility your company wishes to use.

**With Cleura Compliant Cloud,
the cost is always based on the
capacity used, for the time it is used,
with the knowledge that it is done
in a modern IT infrastructure.**

Built with Open Source

At Cleura, we have chosen to build our IT infrastructure on open source software. We do this so that we do not lock our customers into a licensed or proprietary infrastructure that is difficult to change or leave.

Moving to and from a new environment should be simple and cost-effective. There should also be no restrictions preventing you from combining your own infrastructure or other cloud services with our range of services.

Customized agreements

Whether your company needs a private or hybrid cloud solution, we can host it and help you. We help you establish and build your own private solution, regardless of what the solution and agreement needs to look like. Your company's solution is always handled directly and with a separate, customized agreement that covers both functionality and SLA.

We are here to assist you

Knowing which strategy or solution is the best way forward is not always obvious. At Cleura, we have experts in both regulatory compliance and cloud architecture who can help you find the right answer. We can act as advisors in technical design, cloud service selection, analysis of the cloud readiness of planned applications, or how you comply with regulatory requirements in a cloud.

Book an appointment with us for a workshop or an information meeting and we will help you get started.
